

MARBLE POLISHING POWDER

POLISHING POWDER FOR MARBLE AND LIMESTONE

YIELD

The yield varies from 10 to 40 m² of surface with 1 kg of product.

ALWAYS CARRY OUT TESTS BEFORE USE

Anyone, before use, needs to know the characteristics of our products by reading the label affixed to each package, the technical data sheet and the safety data sheet compliant with Regulation (EC) 1272/2008 (CLP) (and subsequent amendments and adjustments) and of Regulation (EU) 2015/830, or eventually by contacting us directly. However, we recommend to strictly follow the instructions given or received.

We also recommend to carry out a preventive sampling to detect any unexpected results with respect to the method of application or the quality of the result. Keep the package well sealed and out of the reach of children. Aerate the working environment well during and also after the application of the product.

Do not eat or drink when using this product.

DESCRIPTION

MARBLE POLISHING POWDER is a mixture of micro-grains of oxides, waxes, organic oxalates, soluble in water, specially designed for the polishing treatment of marble, agglomerates of grit of marble and cement and all limestone stones. The product is easy application and it does not require special equipment, ideal for the restoration and re-polishing even of large surfaces, thanks to its rapid reaction with the calcite contained in the supports from restore. MARBLE POLISHING POWDER is a product for professional use, particularly suitable for companies introduced in the field of maintenance of flooring subject to high pedestrian transit such as: hotels, representative salons, centers commercial, condominiums, offices, etc. Of course the polishing powder can be used both for normal maintenance of re-polishing and for the restoration of those opaque areas due to contact with acidic substances or for other reasons.

MARBLE POLISHING POWDER is applied on floors, coverings, tables, shelves, bathroom tops, kitchen tops, etc.

APPLICATION

Pour 50/100 grams of product on the floor, moisten it with water and mix it until you get a creamy mixture, then slowly rub the mixture obtained with a single brush equipped with scratch-resistant white disc (Scotch-Brite white type 3M). Occasionally add small amounts of powder polishing and water, maintaining always the same consistency of the mixture. Slow processing is an effective method of obtaining excellent shine. For polishing small surfaces, decrease the quantities depending on the size of the support to be polished; in this case you can do the operation manually or with rotational flex always equipped with a scratch-resistant white disc. After polishing, wash the surface with clean water; if needed, refine with clean and dry white felt.

RECOMMENDATIONS

In case of use on black marble prevent the product from drying on the surface by applying in addition a greater dilution in phase of preparation of the mixture. Always have suitable means of personal protection: mask, gloves and protective clothing.

NOTE

Our indications and technical advice, both given by voice or in writing, refer to our personal best knowledge and do not include any guarantee against third parties.

We kindly invite you to adapt our products to your needs and working conditions: methods of use and processing techniques are exclusively under the responsibility of the buyer.

As far as we are concerned, we guarantee constant quality in our supplies within our general conditions of sale. Should you verify our liability for any type of damage, the liability is limited solely and exclusively to the value of the goods supplied by us and used by you.
